DATE: _____

PENALTY FOR LATE SUBMISSION:

- 1-2 days after the deadline - deduction of 25% of the marks obtained for the assignments
- 3 days or more after the deadline - deduction of 50% of the marks obtained for assignments

ASSIGNMENT:

DIPLOMA IN INFORMATION TECHNOLOGY

SUBJECT CODE: DCS2116

SUBJECT: RAPID APPLICATION DEVELOPMENT

PROJECT– 40%

PROJECT

(A group may consist of a maximum of 4-5 members)

LEARNING OUTCOMES:

CLO 1: Apply the principles and concepts of Rapid Application Development. [C3, PLO1]

CLO 2: Apply cloud services in application development. [C3, PLO1]

Scenario

Digital Art & Inspiration Website

You are a digital artist or creative designer who wishes to showcase your artwork and share creative ideas through an online platform.

Your task is to design and develop a visually appealing Digital Art & Inspiration website using ASP.NET Web Forms and a database. The main emphasis of this project is on creativity, layout, and visual design, while implementing basic database functionality.

System Requirements

1. Home Page (Creative Identity)

The Home page should:

- Display the artist or website name
- Include a creative tagline (e.g. *“Where Imagination Comes Alive”*)
- Show a featured artwork image
- Provide a short introduction or welcome message
- Include one Call-to-Action (CTA) button (e.g. *View Gallery*)

2. About the Artist Page

The About page should:

- Introduce the artist
- Describe the artist's
 - Creative inspiration
 - Artistic style (e.g. modern, minimalist, abstract)
- Include one image or illustration

3. Art Gallery Page (Database-Driven)

The Art Gallery page should:

- Retrieve artwork records from a database
- Display at least five (5) artworks
- For each artwork, display:
 - Image
 - Title
 - Short description
- Artworks may be grouped into categories such as:
 - Digital illustrations
 - Posters
 - Concept art

4. Inspiration / Blog Page (Database-Driven)

The Inspiration page should:

- Display creative posts stored in a database
- Show at least two to three (2–3) posts
- Each post should include:
 - Title
 - Short content
 - Date posted

5. Admin / Data Entry Page

The system should include a simple admin page to:

- Add new artwork details into the database
- Add new inspiration or blog posts
- Use basic form controls such as TextBox and Button
(***No login or authentication is required.)

6. Database Design

The database should consist of at least two (2) tables:

Artworks Table

- ArtworkID (Primary Key)
- Title
- Description
- ImagePath
- Category

Posts Table

- PostID (Primary Key)
- Title
- Content
- PostDate

7. Navigation and Layout

The website should include a navigation menu with the following pages:

- Home
- About
- Gallery
- Inspiration

The overall layout must be:

- Clean and well-organized
- Consistent in terms of colors, fonts, and spacing across all pages

8. Styling and Visual Design (Main Focus)

Students are required to apply CSS styling to:

- Use attractive color schemes
- Apply suitable fonts
- Ensure proper alignment and spacing

The website should appear:

- Creative
- Modern
- Professional

Note: Higher marks will be awarded for creativity and visual appeal rather than technical or database complexity.

9. Basic Interaction (bonus mark)

Students may include:

- Button hover effects
- Image hover effects
- Simple success messages (e.g. “*Artwork added successfully*”)

Submission Guidelines:

1. **Website Folder (ZIP File):**
 - Compress your entire website project folder into a ZIP file.
 - Include all necessary code, assets, and documentation.
2. **Documentation:**
 - Create a short PDF that includes:
 - A brief description of the website.
 - Instructions on how to run or deploy the website.
 - Any additional features you added.
 - An overview of your code structure.
 - Mention of any libraries or frameworks used.
 - Explanation of how errors are handled.

Rubrics

Grading Criteria	Excellent	Good	Satisfactory	Needs Improvement	Inadequate	Not Submitted	MARKS
Functionality (40%) Performs accurate operations	The app performs all basic arithmetic operations accurately and handles complex calculations efficiently.	The app performs most basic arithmetic operations accurately and handles common calculations with ease.	The app performs basic arithmetic operations but may have occasional calculation errors or limitations.	The app struggles to perform basic arithmetic operations accurately and lacks key functionality.	The app fails to perform basic arithmetic operations or is non-functional.		
User Interface (15%) Well-designed and user-friendly	The UI is exceptionally well-designed, visually appealing, and highly intuitive for users. It provides an outstanding user experience.	The UI is well-designed, visually appealing, and user-friendly, enhancing the user's experience.	The UI is acceptable but may lack some visual appeal or ease of use. It provides a satisfactory user experience.	The UI has design flaws or lacks user-friendliness, making it challenging for users to navigate and use.	The UI is poorly designed and not user-friendly, causing a frustrating user experience.		
Error Handling (10%) Graceful error handling	The app handles errors gracefully, providing clear error messages and preventing invalid operations effectively.	The app generally handles errors well but may lack clarity in error messages or occasionally allow invalid operations.	The app handles errors to some extent but lacks consistency or clear error messaging.	The app struggles to handle errors effectively, leading to confusion or instability.	The app does not handle errors properly, resulting in frequent crashes or incorrect behavior.		
Styling and Layout (10%) Visual appeal and layout	The app is exceptionally visually appealing, with a well-thought-out layout that enhances the overall user experience.	The app is visually appealing, with a thoughtfully designed layout that contributes to the user's satisfaction.	The app has an acceptable visual design and layout, but there may be some room for improvement.	The app lacks visual appeal and has layout issues that affect the user experience.	The app is poorly styled and has a confusing or cluttered layout, detracting from the user experience.		
Documentation and Readability (20%) Code and instructions	The code is exceptionally well-documented, easy to follow, and accompanied by clear and comprehensive instructions.	The code is well-documented, easy to understand, and supported by clear instructions for building and running the app.	The code is adequately documented, but there may be some gaps in clarity or completeness in the instructions.	The code documentation is insufficient, making it challenging to understand the code, or the instructions are unclear.	The code lacks documentation, making it nearly impossible to understand, and there are no instructions provided.		
Bonus Marks (5%)	Up to 5 bonus marks for exceptional additional features, well-documented and demonstrated.	Up to 3 bonus marks for good extra features with documentation.	Up to 2 bonus marks for some attempted bonus features, partially functional or documented.	Up to 1 bonus mark for limited or incomplete bonus features with minimal documentation.	No bonus features were implemented.

1.0 Introduction

Digital art and creative design have emerged as significant modes of contemporary art display with the emergence of the internet. An increasing number of artists and designers are opting to display their art and express their creative inspiration online. In response to this trend, this project will create a digital art and inspiration site, and will not only offer artists a convenient place to display their work, but will also offer viewers a place to appreciate and be inspired.

The ASP will be used in creating this site.NET Web Forms framework, with database technology to store and manage works of art and inspirational material. It will include multiple functional pages such as homepage, an art gallery, and as inspirational blog, and will dynamically retrieve content from the database to enhance user interactivity and ease of content update. Furthermore, it will provide administrators with a simple data entry interface for convenient management of artworks and inspirational articles.

The primary goal of this project is to create a visually appealing and fully functional digital art showcase platform that not only displays artist's work but also provides viewers with creative inspiration. By utilizing modern web development technologies, the website will offer artists and users a modern, professional and user-friendly platform.

This report will detail the project's background, objectives, implementation methods, and technical architecture, demonstrating how to build an innovative digital art display platform using ASP.NET and database technologies.

2.0 Purpose and Target Users

2.1 Purpose of the website

This website is primarily aimed to provide a visually appealing site on which to display digital art works, as well as illustrating the combined front-end-design and back-end database functionality.

This platform enables the users to navigate through carefully selected digital art collections and be inspired to create with a contemporary interactive experience. It is also a useful case study of Rapid Application Development, in which the emphasis is on the effectiveness of development, user experience and iterative design.

In addition, the platform provides basic content management function through the admin page, allowing the artwork and posts can be added and manged dynamically.

2.2 Target Users

This website is designed to face a wide range of users, including:

1. Digital artists intend to showcase or explore creative artworks.
2. Designers looks for visual inspiration and modern user interface references.
3. Students learning web development and digital design.
4. General user interested to digital art or creative content.

3.0 System Overview

This system is a database driven web application developed using ASP.NET Web Forms and SQL server. It composed by multiple interconnected paged that allows user to browse content and allow administrators to manage data.

The main components of the system include:

3.1 Home Page

The first point to the Digital Art & Inspiration site is the home page and it is aimed at making a good first impression. It seeks to present the site, showcase featured artworks, and direct users towards other parts of the site.

There is a huge hero section on the home page with very impactful digital art and a headline that conveys the theme of the site in the first instance: Where Imagination Comes Alive.

It also has a call-to-action button e.g. View Gallery to ease navigation to the gallery page. The theme is a dark design that has gradient features to appear modern and immersive.

Technically, the homepage is capable of showing dynamic content, like the featured works taken out of the database, representing a combination of the front-end design and the back-end functionality.

3.2 Gallery Page

Among the most important centers is the Gallery Page where the digital artworks are posted in a neat and attractive arrangement.

It allows users to move around different works of art and retain the clarity. The page is laid in a grid format with every work of art being displayed in a card format with a picture, name and description. This design will be as useful as possible and easy to use.

Each and every artwork is dynamically pulled out of the SQL Server database, so that any changes performed via the admin page are automatically reflected. Here we can see data binding and server-side rendering.

3.3 Inspiration Page

The Inspiration Page offers more of a creative post and ideas to the site, diversifying content beyond visual artworks. It has a blog format where it intertwines text and pictures.

The design incorporates titles, descriptions, and supporting visuals, which makes the content interesting and easy to read. This promotes users to find innovative ideas and get inspired.

Technically, all posts are stored in the SQL database and are presented dynamically, which means that the system has the capability of dealing with both textual and visual information.

3.4 About Page

There is an About Page that includes details of the site and the author. This data assists the users to get a feel of what the site is and what it is about.

The page contains words and images such as a photo or a drawing. This renders the site more personal to the users.

The About Page describes what was the reason behind the creation of the site and what it intends to accomplish. The site aims at assisting individuals to be creative and combine art and technology. The site is uncomplicated and comprehensible.

3.5 Admin Page

The screenshot displays the 'Admin Page' for 'ETHEREAL'. At the top, a navigation bar includes 'Home', 'Gallery', 'Inspiration', and 'About'. A success message at the top left states: '✓ Artwork deleted successfully! REMOVING CURATOR DATA ENTRY...'. The main content area is divided into two columns. The left column, titled 'Add Artwork', contains a 'TITLE' field with the value 'Prompt', a 'CATEGORY' dropdown menu set to 'Digital Abstract', an 'IMAGE PATH / URL' field with 'prompt.jpg' and an upload icon, and a 'DESCRIPTION' text area containing the text: 'A surreal 3D-rendered abstract landscape of vibrant orange and purple organic spheres, resembling a microscopic alien world filled with textured floating forms and deep glowing tunnels.' Below these fields is a red 'PUBLISH ARTIFACT' button. The right column, titled 'Add Post', contains an 'ENTRY TITLE' field with 'Future of Neural Art', a 'BROADCAST DATE' field with 'dd/mm/yyyy' and a calendar icon, and a 'CONTENT' text area with the placeholder 'Pen your thoughts for the collective...'. Below the content area is a red 'SYNC TO FEED' button with a document icon. At the bottom of the page, a status bar shows 'DATABASE NODE', 'CURATED ASSETS', 'GLOBAL VIEWS', and 'UPTIME'.

Admin Page allows administrators to control the content of the web site such as adding and removing artworks and posts.

It has form-based inputs to add titles, description and images, which results in an easy and organized data entry.

In this page we have shown the Create, Read, Update, Delete operations, which are fundamental to database-driven systems. It is linked to the SQL Server database, which allows updating in real time.

3.6 Special UI / Design Elements

The site also has modern elements of UI to improve the usability and appearance.

The gradient effects and dark theme produces a futuristic and artistic appearance, and the card-based design has a clear organization of the content. Constant navigation throughout the web pages enhances user experience.

Responsive design can be used to guarantee that the site is functional across other devices, and an appropriate typography and spacing will provide a clear hierarchy in visuals.

These design features add to a professional and interactive interface.

3.7 Additional Features of the Website

The site has other features like standard navigation, dynamic content updating and interaction through forms using the admin panel. It also provides simple data validation and responsive design to provide usability with various devices.

These characteristics enhance the efficiency, usability and maintainability of the system.

All data on the post and all artwork are stored in SQL server database and rendered dynamically on the site by using server-side processing.

The system is organized in terms of layout and the navigation is standardized such that the user experience is easy to navigate through every page.

From a technical perspective, the project operations:

- 1) Database integration
- 2) Dynamic content rendering
- 3) Responsive User Interface design
- 4) User interaction through forms and buttons

In general, the system will be functional and aesthetically appealing, incorporating both aesthetics and useful web development methods.

4.0 Setup

To run and setup the DigitalArtWebsite project in Visual Studio Insiders. First start with by launching the integrated development environment and opening the DigitalArtWebsite.slnx, which serves as the central entry point for the whole application. This solution file references the primary project which located at DigitalArtWebsite/DigitalArtWebsite.csproj, ensuring that all the necessary dependencies, configurations, and sources files are loaded seamlessly inside the workspace. Once the solution is prepared and ready to open it, perform a full build of the project through the Build menu or by pressing CTRL, Shift and B, this step is to compiles the C# code, validates the ASP.NET Web Forms pages and prepares for all associated resources for execution.

After a successful of build, run the application directly by using the IIS Express by pressing F5 or selecting the appropriate run option from the toolbar that display above codes. IIS Express provides a lightweight, integrated web server that replicates a real hosting environment, which allowing for immediate local testing, debugging, and preview of the website without requiring a full IIS installation or external server setup.

5.0 Technologies Used

5.1 Development Environment

This DigitalArtWebsite is a fully functional modern web application that entirely developed within inside the Visual Studio Insider ecosystem, by using the ASP.NET Web Forms as the core framework to build dynamic interactive web pages with strong server-side controls and automatic handling of user actions.

5.2 Backend Development (C#)

The backend is built by using C#, which is a flexible object-oriented programming language from Microsoft, which helps to create clean and easy to maintain code for handling business rules, data processing and user interactions.

5.3 Front-End Technologies

On the front-end side, the applications integrated with HTML to build the structure, CSS for responsive styling and layout design, and for JavaScript is to add client side interactive, validate forms and improve user experience with features like dynamic galleries and real-time feedback

5.4 Database Management (SQL)

SQL is used to manage the relational database that support data driven pages such as Art Gallery and Inspiration. The system includes two mains tables which is Artworks and Posts.

```
24
25
26 -- ARTWORKS TABLE
27 CREATE TABLE dbo.Artworks (
28     ArtworkID INT IDENTITY(1,1) PRIMARY KEY CLUSTERED,
29     Title NVARCHAR(200) NOT NULL,
30     Description NVARCHAR(MAX),
31     ImagePath NVARCHAR(500) NOT NULL,
32     Category NVARCHAR(100)
33 );
34
35 -- POSTS TABLE
36 CREATE TABLE dbo.Posts (
37     PostID INT IDENTITY(1,1) PRIMARY KEY CLUSTERED,
38     Title NVARCHAR(200) NOT NULL,
39     Content NVARCHAR(MAX) NOT NULL,
40     PostDate DATETIME NOT NULL DEFAULT GETDATE()
41 );
42
```

5.5 Data Handling with ADO.NET

The system uses ADO.NET in the C# backend to execute SQL commands to perform basic CRUD operations such as retrieving artwork records for the gallery and adding new artworks or blog posts through the admin page.

During development , we also use the SQL Server Object Explorer in Visual Studio to view and manage the database (including tables such as Artworks and Posts) . this enables developers to manually inspect, insert and update data for testing and verification purposes.

5.6 System Efficiency

This approach ensures that data is stored, retrieved, and managed efficiently, meeting the requirements specified in the project.

5.7 Framework and Tools

By building the application on the stable and time-tested .NET Framework, the entire solution ensures that it is work in high performance, security features like built in authentication support and easy to scalability, making it as an ideal choice for a professional digital art showcase or portfolio platform. All development, setup and deployment are made easier by using Visual Studio Insider's tools, which including IntelliSense, debugging features and project templates. This creating a smooth workflow from initial setup and final execution. It also ensures that developers can quickly run the website on their local machine while maintaining full compatibility with enterprise-level standards.

6.0 Structure + Error Handling

6.1 Code Structure Overview

The system is developed using ASP.NET Web Forms, based on code-behind architecture, and event-driven programming model. This method will isolate the presentation layer, backend logic and configuration, it can improve the modularity and maintainability. This design conforms to the separation of concerns (SoC) principle, it shows that each component has a clearly defined responsibility

- **.aspx → User Interface**

The presentation layer is represented by the .aspx files, where the user interface is specified with the help of HTML, CSS and ASP.NET server control like TextBox, Button, grid view and repeater. These controls allow users to interact and they are processed on the server and must then be rendered as HTML in the browser.

- **.aspx.cs → Backend Logic**

Business logic layer implemented in the .aspx.cs files is the operations, data processing, validation, and database communication with the ADO.NET.

For example:

This shows how the system verifies input prior to executing database operations guaranteeing data integrity.

```
protected void AddArtworkButton_Click(object sender, EventArgs e)
{
    string title = ArtworkTitle.Text.Trim();
    string description = ArtworkDescription.Text.Trim();
    string category = ArtworkCategory.SelectedValue.Trim();
    string imagePath = string.Empty;

    if (string.IsNullOrEmpty(title) || string.IsNullOrEmpty(description))
    {
        ShowMessage("Please fill in all required fields (Title and Description).", "error");
        return;
    }
}
```

- **Site.Master → Layout**

The Site.Master file implements a master page architecture, which allows multiple pages to share a consistent layout and navigation structure.

For example:

This logic dynamically highlights the active page, improving usability and navigation clarity.

```
if (!IsPostBack)
{
    var currentPage = VirtualPathUtility.GetFileName(Request.Url.AbsolutePath)?.ToLowerInvariant();
    string activeClass = "font-headline tracking-tight text-purple-400 font-bold border-b-2 border-purple-500 py-1 transi
    string defaultClass = "font-headline tracking-tight text-slate-400 font-medium hover:text-cyan-400 transition-colors

    NavHome.Attributes["class"] = currentPage == "default.aspx" || currentPage == "" ? activeClass : defaultClass;
    NavGallery.Attributes["class"] = currentPage == "gallery.aspx" ? activeClass : defaultClass;
    NavInspiration.Attributes["class"] = currentPage == "inspiration.aspx" ? activeClass : defaultClass;
    NavAbout.Attributes["class"] = currentPage == "about.aspx" ? activeClass : defaultClass;
}
```

- **Structural Evaluation**

By separating UI, logic, and layout, the system achieves:

- High maintainability
- Better scalability
- Improved code organization

6.2 Error Handling

Error handling is a critical component in ensuring system stability and preventing unexpected runtime failures.

Try-Catch in C#

```
try
{
    string query = "INSERT INTO dbo.Artworks (Title, Description, ImagePath, Category) VALUES (@Title, @Description, @Im";
    string connectionString = ConfigurationManager.ConnectionStrings["ArtGalleryConnection"].ConnectionString;

    using (SqlConnection connection = new SqlConnection(connectionString))
    using (SqlCommand command = new SqlCommand(query, connection))
    {
        command.Parameters.AddWithValue("@Title", title);
        command.Parameters.AddWithValue("@Description", description);
        command.Parameters.AddWithValue("@ImagePath", imagePath);
        command.Parameters.AddWithValue("@Category", string.IsNullOrEmpty(category) ? (object)DBNull.Value : category);

        connection.Open();
        command.ExecuteNonQuery();
    }

    ClearArtworkForm();
    ShowMessage("✓ Artwork saved successfully!", string.Empty);
    LoadArtworksGridView();
}
catch (Exception ex)
{
    ShowMessage("Error saving artwork: " + ex.Message, "error");
    System.Diagnostics.Debug.WriteLine("Error: " + ex.Message);
}
```

The system employs structured exception handling by try-catches especially when dealing with databases.

This approach ensures:

- Exception of runtime is caught and addressed gracefully
- The system fails to crash because of unforeseen errors
- Users are provided with meaningful feedback as opposed to system failure

Basic Validation

```
if (string.IsNullOrWhiteSpace(title) || string.IsNullOrWhiteSpace(description))
{
    ShowMessage("Please fill in all required fields (Title and Description).", "error");
    return;
}
```

Input validation will be used to make sure that only valid data will be processed.

This validation helps:

- Maintain data integrity
- Prevent invalid or incomplete submissions
- Basic protection against incorrect uploads of files

Handling Missing Data

The system handles scenarios where no data is returned from the database:

```
if (table.Rows.Count == 0)
{
    EmptyPostsLabel.Visible = true;
    PostsGridView.Visible = false;
}
else
{
    EmptyPostsLabel.Visible = false;
    PostsGridView.Visible = true;
    PostsGridView.DataSource = table;
    PostsGridView.DataBind();
}
```

This enhances the system robustness by:

- Preventing null reference exceptions
- Ensuring UI does not break when data is missing
- Giving easy feedback to users

7.0 Conclusion

In conclusion, the Digital Art & Inspiration site effectively illustrates the combination of artistic design and the business-like web development. The system offers a visually pleasing environment where users may view digital artworks and be inspired, as well as enables administrators to effectively control content.

In the project, the home page, gallery page, inspiration page, about page and the administration page, among others, collaborate to provide a seamless and interactive user interface. The site as illustrated in the system design is a proper integration of front and back-end design.

Technically, the project brings into focus key ideas like SQL Server database integration, where the artworks and posts are stored and retrieved dynamically. It also shows dynamic content display and user interplay in form of rendering and interaction of the system making it not only functional but responsive as well.

Overall, this project fulfills both its purpose of creating a working digital art platform and offers great experience in creating a web application driven by a database. It explicitly demonstrates the manner in which creativity and technology can be integrated to come up with a modern and user-friendly system.

STUDENT DECLARATION OF GENERATIVE AI USE IN ACADEMIC WORK - GROUP

This form must be submitted together with your assignment to declare the extent of AI usage, if any. Inaccurate or false declarations may result in a breach of academic integrity.

Course Code: DCS2116	Course Title: Rapid Application Development	Lecturer / Instructor's Name: Ms. Noor Zuhaili Bin Md Yasin
Assessment Title: Project		Date of Submission: 21/4/2026
<u>Acknowledgement:</u> We understand that any undeclared or misrepresented use of AI may be considered a breach of INTI's Academic Integrity Policy and may lead to disciplinary action. We acknowledge that we are collectively responsible for the work submitted and may be required to demonstrate its originality or explain how GenAI was used, if requested by the lecturer/instructor or academic authority.
